

A scatter plot showing the relationship between the frequency of words in children's TV and movies (Y-axis) and their frequency in the CHILDES corpus (X-axis). Both axes are on a logarithmic scale. The Y-axis ranges from 10 to 100,000, and the X-axis ranges from 10 to 10,000. A dashed diagonal line represents the identity line (y=x). Numerous data points are plotted as small gray circles. Many points are labeled with words. Words like 'grrr', 'shoulder', 'smile', 'arm', 'eye', 'run', 'cut', 'by', 'into', 'him', 'her', 'my', 'his', 'with', 'on', 'he', 'all', 'go', 'this', 'what', 'do', 'put', 'yes', 'big', 'play', 'baby', 'eat', 'wanna', 'sit', 'daddy', 'was', 'does', 'mommy', 'don't', 'of', 'and', 'to', 'a', 'the', 'you', 'is', 'it', 'that', 'I', 'you', 'the' are labeled. The plot shows that many words are used more frequently in TV and movies than in the CHILDES corpus, especially for words that are not in the top 1000 of CHILDES.
